

## Specify a horse

We make in bronze, stainless steel or galvanised steel They are all different so if you could specify the following, we can quote a price:

- The span (centre to centre)
- Height at edge from the deck
- Camber
- Depth below deck and amount of thread required, or plate size
- Sail area, so we can size the material required

Finally, a neat way to connect the block is to use a "horse slider", which is a small saddle running along the horse. It only really works for a bronze or stainless steel horses, galvanised ones can stick.
